

Beria

Python/Backend Developer & Data/AI Engineer

Istanbul, Türkiye

+90-505-151-9945

beria.aysenur.can@cern.ch

beriaacan

beriaacan

beriaacan.github.io

Profile

- Backend systems and Data Engineering specialist focused on building performant, scalable architectures and MLOps integration. Expert in designing modular backend systems using Python, implementing event-driven architectures, and orchestrating complex ETL pipelines. Passionate about clean API design, system-wide maintainability, and high-traffic software architecture.

Education

• Istanbul Technical University

M.Sc. in Physics Engineering

2024 – Expected June 2026

Istanbul, Türkiye

- Focus on computational physics and large-scale data analysis systems.

• Istanbul Technical University

B.Sc. in Physics Engineering

2020 – 2024

Istanbul, Türkiye

- Graduated **3rd in department**; GPA: 3.3/4.0
- Thesis: ML-based modeling and time-series analysis of environmental sensor data.

Experience

• CERN User (CMS Collaboration)

Graduate Researcher

2025 – Present

Geneva, Switzerland (Remote/Hybrid)

- Managing data workflows and interacting with distributed storage systems within the CMS experiment infrastructure.
- Utilizing Linux-based environments (lxplus) and database loading servers (dbloader) for experiment data management.
- Contributing to infrastructure operations and system access protocols for the HGCAL project.

• Adin.ai

Data Engineer / Backend Developer

2025 – Present

Istanbul, Türkiye

- Designing and maintaining scalable **ETL pipelines** integrating 10+ external APIs .
- Developing modular backend systems and RESTful APIs using **Python**, and **FastAPI** with a focus on clean architecture.
- Deploying serverless applications via **AWS Lambda** and **API Gateway**.
- Establishing observability stacks using **CloudWatch** for production workloads.
- Administering **Linux** environments and containerized services via **Docker** for high-volume data processing.

• SAS

Associate Analytical Consultant / Data Analyst Intern

2024 – 2025

Istanbul, Türkiye

- Built data preprocessing pipelines and SQL-based feature engineering workflows.
- Optimized complex SQL queries and indexing strategies to reduce execution time in analytical environments.

Technical Skills

- **Languages & Frameworks:** Python, SQL, FastAPI, SQLAlchemy, Pandas
- **Datastores & Caching:** PostgreSQL, MySQL, Redis, DynamoDB, MongoDB
- **Cloud-Native & Messaging:** AWS (Lambda, EC2, RDS, S3, ECS Fargate, Step Functions)
- **Data Engineering & DevOps:** ETL, Apache Airflow, dbt, Docker, GitHub Actions, CloudFormation
- **Observability & Tools:** Prometheus, CloudWatch, Git, Swagger/OpenAPI
